Specification

1. The abstract of the disclosure is objected to because it's composed of more than one paragraph. Correction is required. See MPEP § 608.01(b).

Claim Objections

2. Claim 3 line 2 should be revised to read --redistribution circuit further comprises a transition detector--. In line 5, "simultaneously" should be --for simultaneously-- and "disable" should be --disabling--. In line 6, "enables" should be --enabling--. In line 6 there is no antecedent basis for "the control switch".

In claim 5 line 2, "comprising" should be --comprises--. In line 6, "/" should be --or--.

In claim 6 line 2, "comprising" should be --comprises--.

Claim 9 line 2 should be revised to read --redistribution circuit further comprises a transition detector--. In line 5, "simultaneously" should be --for simultaneously-- and "disable" should be --disabling--. In line 6, "enables" should be --enabling--. In line 6 there is no antecedent basis for "the control switch".

In claim 11 line 2, "comprising" should be --comprises--. In line 6, "/" should be --or--.

In claim 13 line 7, change "it" to --said signal line--.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 3, 5, 9, 11, 15 and 17 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Independent claims 1, 7 and 13 define signal lines and sources. Referring to Applicants' Fig. 5, insofar as understood, the source is 502. The signal line is 507. These are two separate and distinct circuit points, however, some dependent claims appear to intermix the terms.

For example, in claim 3 line 3 and claim 9 line 3, "signal line" should be --source--. In claim 3 lines 7 & 8 and claim 9 lines 7 & 8, "a signal line" should be --the source--. In claim 17 there is no antecedent basis for "the signal". Presumably, this should be --a signal from the source--

Again in claim 5 lines 3 & 7 and claim 11 lines 3 & 7, "signal line" should be --source--

In claim 15, "signal line" should be --source circuit--.

Claims 3, 5, 9, 11 and 17 are indefinite.

In claims 3 and 9, switches function to connect their input to their output. In Applicants' Fig. 5, for example, the output of the control switch 506 is hardwired to the source/sink 509. The control switch connects its input 507 to its output 509. Thus the language of claims 3 and 9 is indefinite.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 1-19 are rejected under 35 U.S.C. 102(b) as being anticipated by Prater (USPN 5,574,633).

Figs. 2 and 3 disclose a plurality of signal lines n12, an intermediate floating virtual source/sink 36, a plurality of sources 40 and a charge redistribution circuit (n30, n14 & all of Fig. 3) as recited in claim 1. Component 48 generates the recited idle period.

Line 36 is seen as a charge storage element, a capacitor or a floating conductor as recited in claims 2, 4 and 6.

As best understood, Fig. 3 is the recited transition detector including tri-state drives 56/58 and control switch 54/n30 as recited in claim 3.

As best understood, Fig. 3 further shows a delay circuit 48 and an XOR gate 50 as recited in claim 5.

Claims 1-19 are anticipated for the reasons above.
